Technical Management of Events and Banquets

Executive F&B Operations Manual

Procedures · Coordination · Standards · Service control

2026 EDITION

Ramón Alberto Curbalán Vega

Banqueting and Events Management | F&B Operations

Professional portfolio · Premium hospitality

English-language edition of the reference manual.

Operational framework

A repeatable working system: from the initial briefing to documented closure.

Management model

1. Define: client requirements, event type, spaces and service scope.
2. Plan: room layout, equipment, staff, service schedule and interdepartmental coordination.
3. Prepare: mise en place, equipment checks, room preparation and briefing.
4. Deliver: reception, food and beverage service, timing control and issue resolution.
5. Close: breakdown, cleaning, replenishment and final area inspection.

Contents

01 Purpose and delivery standards

02 Spaces and operational capacity

03 Event types

04 Food and beverage service formats

05 Mise en place and banquet setup

06 Briefing, service sequence and closure

07 Coffee breaks and welcome drinks

08 Meeting rooms and configurations

09 Setup references and final control

Appendices: reusable checklist and technical glossary.

Editorial guidance

Capacities and timings originate from the source document and refer to the establishment described. Validate them against the BEO, approved layout and the property's current standards before each event.

01 · Purpose and delivery standards

A reference guide for consistent operations, an improved guest experience and coordination between departments.

This manual provides a professional operational approach to organising events in a hotel. Its purpose is to standardise preparation and delivery of F&B service, focusing on quality, coordination between departments and attention to detail.

Standardisation helps banquets, meetings, coffee breaks and special services follow consistent criteria regardless of shift or team composition.

Principles of operational management

Standardisation

Visible protocols and sequences so every team knows what it must deliver.

Coordination

Communication between restaurant, kitchen and other departments to synchronise service.

Hospitality

Guest care, discretion and service adapted to each format.

Verification

Pre-service checks, timing monitoring and closure with replenishment.

Application

Review this manual periodically to incorporate products, configurations and service standards authorised by the establishment.

02 · Spaces and operational capacity

A functional inventory of areas: the space determines flows, service sequence and resource needs.

Zone 01 · Ballroom

The ballroom combines three complementary operational spaces: reception, main room and exterior area. Zoning separates the welcome, the celebration and service movements.

Entrance and foyer

Coffee breaks, receptions, party bars and, for some events, a dance area.

Main room

Approximate capacity: 120 guests seated at tables of eight. Weddings, presentations, conferences, conventions and celebrations.

Exterior area

Outdoor events, receptions and cocktail parties; a fixed bar is available.

Control point

Before confirming a setup, check authorised occupancy, service routes, emergency access and the compatibility of the room, furniture and event configuration.

02.1 · Resident and Ses Oliveres areas

Meeting and social hospitality spaces with different operational needs.

Resident

Rooms for conferences, meetings and coffee breaks; a restaurant for approximately 80 guests, with live cooking and a Mallorcan-style interior courtyard.

Ses Oliveres

A central courtyard suitable for receptions, welcome drinks, wedding ceremonies, performances and other outdoor social events.

Technical considerations

The choice of space determines electricity and water points, back-of-house location, station distribution, additional staffing requirements and contingency plans for outdoor service.

03 · Event types

Classification by client purpose and production requirements.

An event is a planned activity designed to fulfil a specific business, social, cultural or gastronomic objective. Its classification determines room preparation, transitions and the service model.

Corporate

Conferences, conventions, congresses, meetings and team-building activities.

Gastronomic

Business breakfasts, lunches and dinners, buffets, brunches, cocktail parties, receptions and galas.

Cultural

Activities related to art, culture and beliefs, together with events run by companies specialising in promotional marketing.

Social celebrations

Weddings, anniversaries, birthdays, club dinners and commemorative gatherings.

Operational application

Reflect the event type in the programme and production instructions: schedule, spatial configuration, service points, resources and the person responsible for each milestone.

04 · Food and beverage service formats

The format defines service pace, resource allocation and guest movement.

Banquets and celebration meals

An organised food service for a special private or corporate occasion, with an agreed menu, a structured schedule and a uniform setup supported by coordinated staff.

- Typical sequence: aperitif, starter, main course, dessert and coffee.
- Lunches and dinners may include a 20-30 minute welcome drink or reception aperitif when planned.
- The menu may include one or two main courses, dessert and coffee, according to the agreement.

Cocktail reception

A dynamic format that encourages interaction: standing guests, drinks and food served on trays, with optional high tables or food stations.

Coffee break

A mid-morning or afternoon break between work sessions, including coffee, tea, water, juices and pastries or savoury snacks. Locate the station close to meeting rooms to minimise travel.

Buffet

Self-service presentation of hot and cold food. Guest flow, bottlenecks, replenishment and temperature supervision require control.

Planning guidance

Record the format, guest count, duration, dietary requirements, number of stations and replenishment responsibilities in the event order. These are recommended planning fields, not mandatory figures from the source document.

05 · Mise en place and preparation

Pre-event preparation checks resources before the room is set up.

T-1 control · advance preparation

- Cutlery: polished and sorted for starter, main course, dessert and coffee.
- Glassware: spotless water, white wine, red wine, cava and supplementary glasses.
- Crockery and serviceware: charger plates, service and bread plates, sauce boats and additional items.
- Furniture: tables, chairs, side tables, lectern and buffet stations as required.
- Drinks and coffee service: wines, water, soft drinks, coffee, tea and bar equipment.
- Room: cleanliness, lighting, air conditioning, access and emergency exits.

Table configuration

Adapt table standards to the menu and the hotel's service identity. The source includes:

- Charger or presentation plate; bread plate with knife.
- Aligned water, white wine and red wine glasses.
- Starter, main course and dessert forks.
- Starter, main course and bread knives; soup or dessert spoon depending on the menu.
- Napkin and decorative service items according to the establishment's standard.

06 · Briefing and service sequence

Delivery requires assigned roles, consistent information and kitchen communication.

Pre-service meeting · T-30 minutes

Hold a team briefing 30 minutes before the event. Review format, guest count and timings; assign positions and sections; coordinate dish release with the kitchen; verify allergies, intolerances and special menus.

Service control sequence

1. Reception: welcome guests, prepare drinks and serve aperitifs where a welcome drink is included.
2. Transition: after the aperitif, escort guests to assigned tables.
3. Drinks: serve water and wine according to the menu, pairing or guest preference.
4. Food: allocate restaurant sections and coordinate dish service and beverage attention.
5. During service: discreet seating checks, removal of unnecessary serviceware and dessert preparation.
6. Dessert and coffee: follow the schedule, take coffee/tea orders and coordinate with the bar or service pantry.

FOH-BOH integration

FOH (front of house) covers guest service and attention. BOH (back of house) includes the kitchen, service pantry and support routes. Define responsibilities, communications and handover points accordingly.

Briefing milestones

Reception and welcome · Drinks and aperitif · Sequential service of starter, main course, dessert and coffees.

06.1 · Closure, breakdown and replenishment

The end of an event includes returning the space to a safe operational condition, ready for the next service.

01 · Clearing

Remove crockery, glassware and cutlery for cleaning and sorting.

02 · Linen

Remove table linen and send it through the laundry process.

03 · Furniture

Collect, organise and sort tables, chairs and support items.

04 · Final inspection

Check for lost property, overall cleanliness and replenishment of used materials.

Post-event management

As a complementary good practice, record incidents, timing deviations and maintenance needs in a closing report. The original document covers breakdown and replenishment but does not prescribe a reporting template.

Operational closure is part of quality control. It ensures continuity between services and identifies resources awaiting replenishment.

07 · Coffee breaks and welcome drinks

Standardising stations, replenishment and guest reception.

Coffee break · station setup

- Cups, saucers and teaspoons; coffee machine and milk/water warmers.
- Capsule dispenser or filter coffee machine; a selection of teas and infusions.
- Water glasses, jugs, bottles, sugar, sweeteners, milk and accompaniments.
- If food is served: a table with pastries, mini sandwiches or agreed items; tongs, spoons, plates, napkins and identifying labels.

Service procedure

Prepare the area sufficiently ahead of the agreed time. Check hot-drink temperatures before starting. Maintain replenishment throughout service. Close in coordination with the meeting schedule without delaying its agenda.

Welcome drinks · reception

Provide white wine, red wine, beer and cava; prepare soft drinks and water on request and aperitif trays with cocktail napkins.

- The source specifies preparing tray-service glasses five minutes before guest arrival.
- Welcome guests with drinks trays at the event entrance.
- Aperitif service begins approximately five minutes after reception starts.

08 · Meeting rooms and configurations

A functional setup combines hospitality, audiovisual equipment and a layout suited to the working format.

Standard equipment

- Folder, paper and pen for each participant.
- Coaster, glass and bottle of water per person.
- A central bowl of sweets or chocolates where specified.
- Requested equipment: a Clipshare-type wireless presentation system; flipchart with paper and red, blue, green and black markers.

Layout types

Classroom

Tables facing the presentation area for presentations and individual work.

Closed classroom

A classroom variation adapted to occupancy and circulation requirements.

Theatre

Rows of seats for presentations and audiences.

Boardroom / presidential

A central table for executive or formal meetings.

U-shape / horseshoe

A layout supporting participant visibility and conversation.

Custom

Combinations based on the briefing and specific client requirements.

09 · Setup references and final control

Examples are configuration references, not automatic approval of occupancy or distribution.

Banqueting · ballroom

The source describes ten round tables, 1.80 m in diameter, with eight chairs each; indicative spacing is 1.5 m between tables and 80 cm between chairs.

80 guests in this example: 10 tables × 8 seats. This reference layout differs from the room's approximate overall capacity of 120 guests.

Preserve emergency exits, staff circulation and access between kitchen and ballroom. The example distances do not replace applicable safety and accessibility checks.

Restaurant setups

The document mentions standard and special configurations in spaces such as Ca Nostra and Rocka, adapted to guest numbers and the contracted buffet, set-menu or cocktail service.

Special setups

For galas, themed events and personalised services, develop the design according to the briefing and hotel standards.

Prior validation

Before issuing the final layout, confirm available furniture, routes, occupancy, technical requirements and transition timings with the managers of the relevant areas.

Appendix A · Reusable operational checklist

An additional tool based on the procedures described in the source manual.

Pre-production

- Briefing and event order reviewed with the departments involved.
- Attendance, menu and special requirements confirmed.
- Setup plan and room routes verified.
- Furniture, serviceware, drinks and support station prepared.
- Lighting, cleanliness, air conditioning and access checked.

Delivery

- Team in position and pre-service briefing completed.
- Kitchen and restaurant aligned on service milestones.
- Reception and drinks sequence verified.
- Allergies, intolerances and special menus communicated.
- Replenishment and issue handling controlled.

Post-event

- Crockery, glassware, cutlery and linen removed.
- Furniture sorted and area inspected.
- Materials replenished and closing observations recorded.

Recommended use

This checklist is an editorial aid to applying the procedures; it is not a separate form in the original PDF.

Suggested monitoring criteria

Punctuality: deviations from reception and dish-service schedules.

Consistency: compliance with mise en place and the defined sequence.

Service: guest-service incidents and their resolution.

Replenishment: product availability throughout coffee breaks and buffets.

Appendix B · Glossary and document traceability

Terminology used in banqueting operations.

BEO

Banquet Event Order: the event sheet/order providing coordinated production information.

Mise en place

Technical preparation of equipment and service space before an event.

Layout

The spatial plan showing tables, stations, access and circulation.

Briefing

A pre-service alignment meeting to distribute information and responsibilities.

Timing / run of show

The schedule of milestones and the pace of event delivery.

Seating

Planned guest allocation or distribution within the room.

FOH / BOH

Guest-facing areas / operational support and production areas.

Service pantry (office)

An area near the restaurant for service support and coordination.
